

João Roberto Lawall Soares

Full Stack Software Engineer | Golang, PostgreSQL, React & TypeScript

+55 51 991363373 • blsoaresdev@gmail.com • [LinkedIn](#) • [GitHub](#) • Lajeado, RS, Brazil (GMT-3)

Summary

Full Stack Software Engineer, 6+ years writing Golang and PostgreSQL on the backend with React and TypeScript on the frontend. Built distributed systems and microservices for an invoicing platform that handles 140M+ monthly transactions. Comfortable across the full delivery loop: API design (REST, gRPC, OpenAPI), CI/CD, unit and integration testing, and code review. Daily user of Claude Code and Cursor, and an active Rust contributor to the Zed editor (70k+ GitHub stars).

Key Achievements

◆ Distributed Systems

Fixed a critical concurrency bug across Kafka consumers and Golang services processing 140M+ monthly transactions with zero downtime.

◆ PostgreSQL Performance

Cut PostgreSQL query times by up to 85% (30s reduction) by rewriting execution plans and adding targeted indexes.

◆ AI-Augmented Delivery

Rolled out Claude Code and Cursor on a Golang team of 6; team velocity went up 30% the next quarter.

Professional Experience

Platform Builders

Senior Full Stack Software Engineer (Golang)

Brazil (Remote)
Aug 2025 - Present

Full-time | RD Saúde - Brazil's largest pharmaceutical retailer

- Build core services in Golang and PostgreSQL for an invoicing platform that processes 140M+ monthly transactions; work daily with product managers, designers, and other engineers.
- Fixed a concurrency bug in the invoicing pipeline that was causing fiscal compliance failures. Mutex-based synchronization on the Apache Kafka consumers brought duplicate-invoice rate to zero and pushed idempotency to 99.99%.
- Design REST APIs and gRPC services in Golang, document them with OpenAPI / Protocol Buffers, and review pull requests from 5 other engineers each week.
- Migrated the database from Oracle to PostgreSQL. Rewrote execution plans and added targeted indexes; the slowest queries dropped by over a minute.
- Write unit and integration tests for everything I ship; 15+ Golang features released with zero production incidents.
- Reworked goroutine management to cut service latency by 40%. Set up the CI/CD pipeline (Docker, GitHub Actions) the team uses today.
- Got the team onto Claude Code, Cursor, and GitHub Copilot; mentored 5 developers on Go concurrency and architecture. Velocity went up 30% the following quarter.
- Tech Stack: Golang, PostgreSQL, Apache Kafka, Docker, CI/CD, REST API, gRPC, OpenAPI, Microservices, Distributed Systems, Angular, OCI.

Docile Alimentos LTDA

Full Stack Software Engineer

Lajeado, RS, Brazil (Remote)
Jan 2020 - Aug 2025

Full-time

- Built Golang backend services for distributed data pipelines. New concurrency patterns pushed throughput up 50%.
- Shipped full-stack features: React and TypeScript on the frontend, Golang / NestJS / Spring Boot REST APIs on the backend, working directly with product and design.
- Broke a Java/JSF monolith into Spring Boot microservices with an Angular frontend. Performance went up 40% and each service got its own CI/CD pipeline.
- Tuned 20+ PostgreSQL queries (schemas, indexes, plans) for 45% average speedup. Reworked MongoDB aggregation pipelines and cut their times by 85%.
- Wrote unit and integration tests across Golang, Java, and TypeScript; reviewed pull requests with the rest of the team.
- Automated file imports with RPA, saving the ops team 15 hours a week (70% reduction). Shipped 50+ bug fixes and features with 98% on-time delivery.
- Tech Stack: Golang, React, TypeScript, JavaScript, Java, Spring Boot, NestJS, Angular, PostgreSQL, MongoDB, SQL Server, Docker, CI/CD, REST API, Microservices, Linux.

Borderless Coding

Web3 Technical Mentor & Ambassador

London Area, UK (Remote)
Sep 2025 - Present

Part-time

- Mentored 60+ engineers on smart contract architecture and API design; 95% satisfaction across cohorts.
- Ran 20+ live workshops on Solidity, Foundry, Hardhat, and AI-assisted dev workflows (Claude Code, Cursor).

Technical Skills

Languages: Go (Golang), TypeScript, JavaScript, Java, Rust, SQL, Bash, Solidity

Backend: Golang, REST API, gRPC, Protocol Buffers, OpenAPI / Swagger, GraphQL, Microservices, Spring Boot, NestJS, Express.js

Frontend: React, TypeScript, JavaScript, Next.js, Angular, HTML5, CSS3

Databases: PostgreSQL, MongoDB, Redis, MySQL, SQL Server, Query Optimization, Schema Design

Distributed Systems: Apache Kafka, RabbitMQ, Amazon SQS, Event-Driven Architecture, Microservices, System Design
Cloud & DevOps: AWS (EC2, S3, RDS, Lambda), Docker, Kubernetes, CI/CD Pipelines, Linux, Grafana, Prometheus, ELK Stack, Application Performance Monitoring
Architecture: Clean Architecture, SOLID, Design Patterns, DDD, TDD, Distributed Systems Design, API Design
Testing: Unit Testing, Integration Testing, TDD, Code Review, Continuous Integration
AI-Augmented Engineering: Claude Code, Cursor, GitHub Copilot, AI-assisted code review, automated documentation
Tools: Git, GitHub, GitLab, Jira, Agile/Scrum

Open Source Contributions

Zed Editor • [GitHub \(70k+ Stars\)](#) — Rust

Contributor to Zed, a code editor written in Rust. 53 PRs submitted (19 merged) across 15+ subsystems, totaling 5,000+ lines:

- Found and fixed a macOS deadlock in the GPUI rendering framework where re-entrant key status changes froze the UI. ([#51035](#) – Merged)
- Reworked picker selection logic across 11 files so non-selectable entries can no longer confirm unintended actions in the command palette. ([#50705](#) – Merged, +185/-51)
- Fixed **formatter**: "auto" so it skips language servers that cannot actually format, instead of failing silently. ([#50661](#) – Merged)
- Fixed semantic tokens not appearing when opening buffer from multibuffer, restoring accurate syntax highlighting in a core editor flow. ([#53712](#) – Merged)
- Debugged and fixed terminal rendering missing the first line due to floating-point tolerance in the layout calculation. ([#52111](#) – Merged)
- Also contributed to GPUI, DAP debugger, theme selector, markdown rendering, and platform fixes on macOS and Linux/X11. ([View all PRs](#))

Projects

Auto-Issue | Autonomous GitHub Issue Agent • [GitHub](#)

Electron + Go app that takes a GitHub issue, hands it to an AI agent (Claude Code, OpenAI Codex, or Gemini), and opens a PR with self-reviewed code. Built the entire Go backend: multi-provider agent runner that spawns CLI subprocesses over PTY, an orchestrator with a work queue and concurrency limiter, per-issue git worktree isolation, SSE streaming to the frontend, and a 15+ endpoint REST API. Persistence via GORM and PostgreSQL.

Veste AI | AI-Powered Fashion Assistant • [GitHub](#)

Golang backend that calls the Google Gemini API to analyze outfits. REST API with cloud-based image processing. Built at a hackathon.

DarkPool-Exchange | ZK Dark Pool DEX with Batch Auctions • [GitHub](#)

DEX where orders stay private until settlement. Traders encrypt orders to the operator and the engine matches them in periodic batch auctions with a clearing price per round. Built the Rust + Web3 layer: halo2 / arkworks circuits, WASM proof generation, on-chain proof aggregator, and Solidity verifier integration.

Crypto-Tip | Decentralized Tipping Platform • [GitHub \(34 Stars\)](#)

Smart contracts in Solidity (Ethereum) and Rust (Solana) for open-source funding. MetaMask and Phantom wallet integrations.

Education

Universidade do Vale do Taquari - Univates	2021 - 2025
Bachelor's Degree, Computer Science	

Languages

English - Proficient (Professional Working Proficiency)	Portuguese - Native Speaker
