Hiring Team
Akuity

Dear Hiring Team,

I'm applying for the Senior Golang Engineer position at Akuity. I've spent 6+ years building backend systems, with the last 3+ focused on Go. The work you're doing around Argo CD and Kargo is the kind of infrastructure I want to work on – developer tooling that has to hold up at scale.

At my current role (Platform Builders, contracted to RD Saúde), I work on a Go platform processing 140M+ monthly transactions. I tracked down and fixed a concurrency bug in the invoicing pipeline that was causing fiscal compliance failures across distributed Kafka consumers. The fix involved mutex-based synchronization to eliminate race conditions, and we deployed it with zero downtime. I also led the database migration from Oracle to PostgreSQL, rewriting execution plans and adding indexes that cut query times by over a minute on the worst cases.

Before that, at Docile Alimentos, I broke apart a Java monolith into containerized microservices, built Go services that pushed throughput up 50%, and spent a lot of time tuning PostgreSQL and MongoDB queries. I work with Docker, Kubernetes, AWS, Prometheus, and Grafana day to day.

Outside of work, I contribute to the Zed code editor, a Rust project with 70k+ GitHub stars. 19 merged PRs across 15+ subsystems – rendering framework bugs, LSP integration, terminal handling. Working on a developer tool used by thousands of people changed how I think about the developer-facing side of infrastructure. I also built Auto-Issue, a Go backend that takes GitHub issues and produces PRs autonomously, with worktree isolation, a work queue, and PostgreSQL persistence.

I haven't used Argo CD or Kargo directly, but I work with the patterns they rely on: containerized deployments, CI/CD pipelines, and distributed systems on AWS. I pick up new codebases fast – the Zed work proves that – and I'd be glad to get into the GitOps tooling you're building.

I'm based in Brazil (GMT-3), which overlaps with US Eastern time. Happy to discuss further.

Best,
João Roberto Lawall Soares
